

## SUMMARY OF INTERVIEW

### Exhibits and/or Demonstrations

None.

### Identification of Claims Discussed

Claim 1, 23, 43 and 44.

### Identification of Prior Art Discussed

Sarshar (WO 95/074414) and Wiltshire et al. (GB 2 239 676).

### Proposed Amendments

Amendment of claims 1, 23, 43 and 44 to replace "sustainable gas source" with the particular sustainable gas sources recited in the specification.

### Principal Arguments and Other Matters

Applicants' representatives argued that none of the cited references teach or suggest any sustainable gas sources, much less those particular sustainable gas sources recited in the claims. The combination of the sustainable gas source, compressor and positive displacement pump as recited in the present claims results in unexpected advantages that could not have been predicted by one of ordinary skill in the art.

### Results of Interview

The Examiners noted that the proposed claim amendments would be favorably received, and requested that Applicants submit a written response.
